

Pets Across Worlds

Overview

Pets Across Worlds is a virtual pets game where you nurture an Augmented Reality pet. Scan a Pets Across Worlds playing card to spawn them in any environment where you can then feed your pet or play ball with them! Collect all the different pets by collecting each of the Pets Across Worlds playing cards!

Recommended System requirements

- Android device
- 1080 x 2400 (FHD+) resolution

Walkthrough

The overarching goal is to keep your pet alive. Follow the steps on the ingame todo list (Each stat bar goes up till 10, fill stats to over an 8).

Scan in your pet

Scan a Pets Across Worlds playing card to spawn the associated pet.

If you do not already have a pet of this type associated to your account, it will prompt you to enter a name for the new pet.

Feed your pet

Select the "Feed" above the pet

Select one of the 5 foods in the pop up menu. Each pet has a favorite food, shown below:

Pet Type	Favorite food	Least Favorite food
Neoncat	Fish	Apple
Updog	Meat	Bread
Tokiwi	Carrot	Meat

The pet is given food points based on how much it likes the food, with:

- Favorite Food (3 points)
- Neutral Food (1 point)
- Least Favorite food (0.5 points)

 Play with your pet

Select the "Play" above the pet

When the game begins, press the ball when the red indicator appears on it. If you take too long, the game will end

The pet is given mood points based on the score achieved, as shown:

- 1 mood point per 3 game score
- +3 mood points if the player breaks their highscore

 Let your pet sleep

Select the "Sleep" above the pet

The pet will go to sleep for a duration of time based on the sleep times shown below:

Pet Type	Sleep Duration (hh-mm-ss)
Neoncat	04-20-00
Updog	05-30-00
Tokiwi	02-45-30

Sleeping brings the player to an end screen indication how long till the pet wakes up, as well as a "Thanks for playing" and prompt to return to the main menu.

This acts as the "End" of the experience

While the pet is sleeping, they will not be able to be scanned in and instead show an indicator of how long till they wake up

Bugs and Limitations

- In mobile builds of the game, the player must keep the tracked image in frame the whole time during the creation of the pet, or else the pet will not spawn
